QUESTION: Consider the discrete time signal $x[n] = u[-n + 5] - u[n + 3]$, where

$$u[n] = \begin{cases} 1; n \geq 0 \\ 0; n < 0 \end{cases}$$

The smallest n for which $x[n] = 0$ is?

Solution: $x(n)$ can be defined as

$$x(n) = h(n) - f(n) \quad (1)$$

Where

$$h(n) = u(-n + 5) \quad (2)$$

$$f(n) = u(n + 3) \quad (3)$$

Find the values of n for which

$$h(n) = f(n) \quad (4)$$

Using Fig. 1 to get the values of n , the range of n is given as

$$n \in [-3, 5]$$

Hence the lowest value of n

$$\boxed{n = -3} \quad (5)$$
